Colour Scheme to be used:(Use the following color scheme throughout your app)   [Marks: 6]

https://material.io/tools/color/#!/?view.left=0&view.right=0&primary.color=64FFDA

Font to be used: Montserrat Medium   [Marks: 3]

Problem:
Create 2 activities.
-> List Activity: It will have a recyclerview list. There will be a floating action button at the bottom right corner as shown below to add items to the list.
Color scheme and fonts as mentioned before. A click on the button takes the user to the AddItemActivity as explained below.
                                                                [Marks: 7.5]

-> AddItemActivity: It will have 2 Edittext fields and a simple submit button which adds a new item to the above list. [Marks: 7.5]

Note: You should use permanent storage so that you don't lose the previous objects(Hint: Try to think about what permanent storage we have learned in class. How can you use it?)

Create an XML item for the list items. It should have 2 textviews and an image view. The same image for all items(you can use a drawable resource like the Facebook image I provided in class)
[Marks: 3]

Remaining 3 Marks are for submitting the project via GitHub.

Total marks: 25.
